## **Migration from Cities to Nature It has accelerated, do not delay!**

---

A reverse migration from cities to nature and villages began due to earthquakes, health, security, peace, economy and many other reasons. The trend towards living in a house with a garden outside the city turned into a trend with the pandemic.

Retirees, white-collar workers, young couples, home-based or hybrid workers are pursuing the dream of a detached life with a garden and are searching for alternative living spaces in the lap of nature. Rural life is changing its shell with them.

Those who want to purchase land or fields in villages and build reinforced concrete, light steel, prefabricated, stone, wooden, log, capsule houses, bungalows or tiny houses in accordance with their budget and zoning, as well as village houses, farms and chalets suitable for residence or renovation. Those who try to buy a plateau house, vineyard house or hobby house are also on the road to follow their dreams.

For a happy and healthy alternative life, home options with gardens that are oxygen-rich, adjacent to lush green nature, stress-free and offer access to natural food, and its zoning, infrastructure, construction, renovation, insulation, landscaping, energy, decoration, plant and animal production solutions. For the first time in Türkiye, it is at this fair and under one roof...

## REAL ESTATE, PROJECTS
